Mouse Print Analysis

1. Mac Mouse

- This mouse felt very small in my hand, it made some of the least contact with my hand as it only touched my hand in all sections of A, B, and C and in the sections F1&2.
- I liked this mouse the least because of its flatness and the fact that it made no contact with my palm in sections F3&4 or my thumb in both E sections.

2. Lenovo Mouse

- This mouse was the second worst mouse in my opinion as while it was larger and had more support in Sections F1&2, the shape still did not fit my hand in a comfortable way and still made almost no contact in sections F3&4.

3. Microsoft Mouse

- This was the best mouse as it offered the best overall hand coverage and made good thumb contact in sections E1&2.

- This mouse offered the best palm support as it made contact in sections F3&4 which no other mouse in the sample did.

4. Amazon Mouse

- This would have been my favorite mouse of the selection, but it was too small to fit my hand.
- It made really comfortable contact in sections F1&2 but didn't quite reach F3&4 which is something I look for in a mouse.
